

Amendments To Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-7 (Cancelled)

8. (Currently Amended): A method comprising:

sequentially initiating, by a computer based calling system, a first call and a second call by dialing a first phone number and a second phone number, respectively, in response to sequentially receiving a first command and a second command, respectively, wherein the first phone number and the second phone number are sequentially included in a stored list; and

deleting, by the computer based calling system, the first phone number and the second phone number from the list in response to a completion of the first call and the second call, respectively.

9. (Previously Presented): The method of claim 8, further comprising receiving an indication that at least one of the first or second commands is input via an abbreviated command.

10. (Previously Presented): The method of claim 8, further comprising receiving an indication that at least one of the first or second commands is input via a voice command.

11. (Previously Presented): The method of claim 8, further comprising receiving an indication that at least one of the first or second commands is input via one or more key buttons of a communications device that performs the sequentially initiating and the deleting.

12. (Previously Presented): The method of claim 8, further comprising outputting a pre-recorded message associated with at least one of the first or second phone numbers before dialing the at least one of the first or second phone numbers.

13. (Previously Presented): The method of claim 12, wherein outputting a pre-recorded message includes outputting a stored voice message.

14. (Currently Amended): The method of claim 8, further comprising returning to one of the first or second phone numbers when in response to the first or second call to the first or second phone number is being unanswered.
15. (Previously Presented): The method of claim 14, wherein the returning is performed without manually entering the one of the first or second phone numbers.
16. (Currently Amended): The method of claim 8, further comprising rescheduling the dialing of a particular one of the first or second phone numbers when in response to the particular one of the first or second phone numbers is being unanswered.
17. (Previously Presented): The method of claim 16, wherein the rescheduling is performed without manually entering the particular one of the first or second phone numbers.
18. (Previously Presented): The method of claim 8, further comprising forming the list to include phone numbers of calls that were received by a communications device and not answered.
19. (Previously Presented): The method of claim 18, wherein the forming uses a caller ID.
20. (Previously Presented): The method of claim 18, wherein forming the list includes forming a schedule that details when at least one of the first or second phone numbers is to be dialed.
21. (Currently amended): An apparatus comprising:
means for receiving at least one of a plurality of a-commands to dial at least one of a plurality of phone numbers included in a list, wherein each command of the plurality of commands corresponds to a different phone number of the plurality of phone numbers;
means for outputting a pre-recorded message that is associated with the one of the phone numbers;
means for dialing the one of the phone numbers after the outputting of the pre-recorded message by the outputting means; and
means for resolving a call to the one of the phone numbers that is a result of the dialing.

22. (Previously Presented): The apparatus of claim 21, wherein the means for receiving a command is configured to receive an abbreviated command.
23. (Previously Presented): The apparatus of claim 21, wherein the means for receiving a command is configured to receive a voice command.
24. (Previously Presented): The apparatus of claim 21, wherein the means for receiving a command is configured to receive input via one or more key buttons.
25. (Previously Presented): The apparatus of claim 21, wherein the means for outputting a pre-recorded message is configured to output a stored voice message.
26. (Previously Presented): The apparatus of claim 21, wherein the resolving means includes means for returning to the one of the phone numbers in response to determining that the call to the one of the telephone numbers is unanswered.
27. (Previously Presented): The apparatus of claim 26, wherein the returning means is configured to perform without manual entry of the first of the plurality of phone numbers.
28. (Currently amended): The apparatus of claim 26, wherein the returning means is configured to reschedule the dialing of the first of the plurality of phone numbers when in response to the first of the plurality of phone numbers is being unanswered.
29. (Previously Presented): An apparatus of claim 28, wherein the returning means is configured to perform without manual entry of the first of the plurality of phone numbers.
30. (Previously Presented): The apparatus of claim 21, further comprising means for forming the list to include one or more of the plurality of phone numbers that correspond to one or more calls that were received but not answered.

31. (Previously Presented): The apparatus of claim 30, wherein the means for forming is configured to use a caller ID.
32. (Previously Presented): The apparatus of claim 30, wherein means for forming the list is configured to form a schedule that details when at least one of the plurality of phone numbers is to be dialed.
33. (Currently amended): One or more tangible non-transitory computer-readable media comprising instructions that are executable by a communications device ~~to that, in response to being executed, perform the operations comprising:~~
initiate initiating dialing of a plurality of phone numbers included in a list stored by the communications device sequentially such that the dialing of at least two of the plurality of phone numbers is initiated by [[a]] respective commands, sequentially; and
returning to one or more of the plurality of phone numbers that are unanswered.
34. (Previously Presented): The one or more tangible computer-readable media of claim 33, wherein at least one of the plurality of sequential commands is input via an abbreviated command.
35. (Previously Presented): The one or more tangible computer readable media of claim 33, wherein at least one of the plurality of sequential commands is input via a voice command.
36. (Previously Presented): The one or more tangible computer readable media of claim 33, wherein at least one of the plurality of sequential commands is input via one or more key buttons of the communications device.
37. (Previously Presented): The one or more tangible computer-readable media of claim 33, wherein the instructions are further configured to cause an output of a pre-recorded message associated with a particular one of the plurality of phone numbers before dialing.
38. (Previously Presented): The one or more tangible computer readable media of claim 37, wherein the instructions are executable by the communications device to output a stored voice message.

39. (Previously Presented): The one or more tangible computer-readable media of claim 33, wherein the return is performed without manually entering the One or more of the plurality of phone numbers.

40. (Currently amended): The one or more tangible computer-readable media of claim 33, wherein the returning includes rescheduling the dialing of the one or more said phone numbers when in response to the one or more said phone numbers is being unanswered.

41. (Previously Presented): The one or more tangible computer-readable media of claim 33, wherein the instructions are executable to form the list to include phone numbers of calls that were received by the communications device and not answered.

42. (Previously Presented): The one or more tangible computer readable media of claim 41, wherein the instructions are executable to form the list using a caller ID.

43. (Previously Presented): The one or more tangible computer-readable media of claim 41, wherein the instructions are executable to form the list as a schedule that details when at least one said phone number is to be dialed.

44. (Currently amended): A communications device comprising:
a processor and memory having instructions that are executable, wherein the instructions cause the communications device on the processor to perform operations including:
forming a list having a plurality of phone numbers of unanswered calls of the communications device; and
~~provide a feature to~~ sequentially ~~initiate~~ initiating dialing of the plurality of phone numbers included in the list, such that the dialing of at least two of the plurality of phone numbers is initiated by [[a]] respective commands, sequentially.

45. (Previously Presented): The communications device of claim 44, wherein at least one of the plurality of sequential commands is input via an abbreviated command.

46. (Previously Presented): The communications device of claim 44, wherein at least one of the plurality of sequential commands is input via a voice command.

47. (Previously Presented): The communications device of claim 44, wherein at least one of the plurality of sequential commands is input via one or more key buttons of the communications device.

48. (Previously Presented): The communications device of claim 44, wherein the instructions are further executable to output a pre-recorded message associated with one of the plurality of phone numbers before the dialing of the phone number.

49. (Previously Presented): The communications device of claim 48, wherein the instructions are executable on the processor to output the pre-recorded message as a stored voice message.

50. (Previously Presented): The communications device of claim 44, further comprising instructions executable on the processor to reschedule the dialing of a particular said telephone number in response to determining that a call directed to the particular said phone number is unanswered.

51. (Previously Presented): The communications device of claim 50, wherein the instructions to reschedule the dialing are configured to perform the redialing without manually entering the particular said phone number.

52. (Previously Presented): The communications device of claim 44, further comprising instructions that are executable to form the list using caller IDs to include phone numbers of calls that were received by the communications device and were not answered.

53. (Previously Presented): The communications device of claim 52, wherein the instructions to form the list are configured to form a schedule that details when at least one of the plurality of phone numbers is to be dialed.

54. (Currently Amended): A method comprising:

initiating, by a computer based calling system, a first call by dialing a first phone number in response to receiving a first command, wherein the first phone number is selected from a list of phone numbers comprising the first phone number and a second phone number, wherein the first phone number and the second phone number are sequentially included in the list;

deleting, by the computer based calling system, the first phone number from the list in response to completing the dialing of the first phone number;

initiating, by the computer based calling system, a second call after completing the dialing of the first call by dialing the second phone number in response to receiving a second command; and

deleting, by the computer based calling system, the second phone number from the list in response to completing the dialing of the second phone number.

55. (Previously Presented): The method of claim 54, wherein the first command is the same as the second command.

56. (Previously Presented): The method of claim 54, wherein the first command is different from the second command.

57. (Previously Presented): The method of claim 54, further comprising receiving an indication that at least one of the first command or the second command is input via an abbreviated command.

58. (Previously Presented): The method of claim 54, further comprising receiving an indication that at least one of the first command or the second command is input via a voice command.

59. (Previously Presented): The method of claim 54, further comprising receiving an indication that at least one of the first command or the second command is input via one or more key buttons of the communications device.

60. (Previously Presented): The method of claim 54, further comprising outputting a pre-recorded message associated with at least one of the first or second phone numbers before dialing the respective one of the first or second phone numbers.

61. (Previously Presented): The method of claim 60, wherein outputting a pre-recorded message includes outputting a stored voice message.

62. (Currently Amended): The method of claim 54, further comprising returning to the first or second phone number ~~when~~ in response to a call to the respective first or second phone number is not being answered.

63. (Previously Presented): The method of claim 62, wherein the returning is performed without manually entering the respective first or second phone number.

64. (Currently Amended): The method of claim 54, further comprising rescheduling the dialing of the first or second phone number ~~when~~ in response to a call to the respective first or second phone number is not being answered.

65. (Previously Presented): The method of claim 64, wherein the rescheduling is performed without manually entering the respective first or second phone number.

66. (Previously Presented): The method of claim 54, further comprising forming the sequential list to include phone numbers of calls that were received by the communications device and not answered.

67. (Previously Presented): The method of claim 66, wherein the forming uses a caller ID.

68. (Previously Presented): The method of claim 66, wherein forming the sequential list includes forming a schedule that details when at least one of the first or second phone numbers is to be dialed.
